### Vaccine Excipient & Media Summary

Excipients Included in U.S. Vaccines, by Vaccine

human diploid cell lines which were originally prepared from tissues of aborted fetuses (in 1964 and 1970)

This table includes not only vaccine ingredients (e.g., adjuvants and preservatives), but also substances used during the manufacturing process, including vaccine-production media, that are removed from the final product and present only in trace quantities.

In addition to the substances listed, most vaccines contain Sodium Chloride (table salt). Babies have only
